SANITARY FITTINGS IN STAINLESS STEEL

LOCATION

Wagner-EWAR has been developing and producing high quality stainless steel washroom products for commercial washrooms since 1974.

STAINLESS STEEL

Wagner products are exclusively manufactured using high-quality nickel chromium steel, material number AISI 304 or higher quality. The visible surfaces are satin finished and in addition brushed; as an option they are also available in a highly polished surface or powder coated in any RAL colour.

QUALITY

Timeless design and modular constructions with fully welded housings, almost invisibly mounted add-on parts, 100% deburred individual parts inside and outside, are our quality standards for optimal hygiene and long service life of our products.

LOW FOLLOW-UP COSTS

Our soap and paper towel dispensers can be filled with customary and therefore inexpensive consumables; you are not dependent on specific manufacturers. Required spare and wear parts are permanently available and can easily be replaced by the service staff.

FROM PLANNING TO OPERATION

During your planning, we would like to inform you about the wide product range by phone or on site. On our homepage www.wagner-ewar.de/en you will find extensive product information: data sheets, pictures as well as tender texts and CAD files in numerous formats. In case of special designs we support you as well. You will receive offers within 1 - 2 business days, deliveries often directly from stock or within a few days. Even after commissioning, our service is always unbureaucratic and fast.

PRODUCTS

Wagner EWAR offers three design lines for washroom and toilet equipment, along with a product line for equipping accessible washrooms, toilets and showers.
